ELECTRIC GRATE

ELECTRIC GRATE Nos. 343 AND 341

For those who want effect rather than heat, this grate fitted with apparently live coals gives a realistic appearance of the genuine fireplace.

This very popular grate is of unusual height; its cast iron back extends 18 inches above the floor. Front columns make andirons unnecessary. The most beautiful grate obtainable at the price. Complete with glass coals, lamps and fans.

Furnished Ready to Plug in—Chain Switch—Finishes Mottled Bronze, Black and Gold, Lusterless Black and Half Polished Flemish.

No.	Front Width	Height	Depth	Price

Electric Grates Nos. 343 and 341

FIREPLACE GRATES FOR SERVICE

No. 54. Knock-down
Grate With Sloping Ends

GRATE NO. 54

A Knock-down cradle grate of heavy castings. Bottom piece locks the front and back securely, making a substantial grate. Ends are sloped, making grate 6 inches narrower at the back. If the side walls in the fireplace opening slant inward, this is the best stock grate for all purposes.

Front width21" 24" 27" 30" 36"
Back width15" 18" 21" 24" 30"
All widths are 16 inches in depth from front to back.

These grates are the best for general use in a fireplace when wood or coal is used for fuel. They are simple in design, very substantial and will stand hard usage. The fireplace opening for these grates must be not less than 16 inches from front to back. Width of grates No. 44 or No. 440 should be determined by the width of back lining of the fireplace; front width and back width of grate are the same.

No. 44. Grate.

No. 440. Grate Removable Ends

No. 440—Movable ends made to fit into any of the spaces forming a Coal Grate at any size within the length of grate.

No. 14. Regular Stock Size Club House Grate

No. 14. SPECIAL Club House Grate

No. 14B. Special Club House Grate

No. 18. Wood Burning Grate

48 inches and longer. For smaller sizes order No. 14 Club House, which can be supplied with front posts only, omitting horizontal bars.

HEAVY WOOD BURNING GRATE No. 18

Very heavy Grate; Bars 1½ inches thick. Made for burning wood logs. Platform on legs about 6½ inches high with front standards to keep logs from rolling off. This Grate is made any size desired, 48 inches or longer. Price depends on size of Grate. Send size of fireplace opening for quotations.

Diagram Showing
How to Measure
Fireplace for
Cradle Grates

CLUB HOUSE GRATES

Club House Grates are made without sides or back, depending on the firebrick lining walls and coals are banked up against the firebrick back. These are the best type of grates made for all kinds of fuel and hard service.

If your fireplace is not built you can have the opening made to size of any one of these Grates. Allow an air space of about ¾" at back and ends of Grate. They may be set flush with front, or back 2 or 3 inches. It is better set back. Our 30", 33" and 36" sizes are extra heavy, made the same as our Special Grates with Casters on back legs and dumping bottom. The 21", 24" and 27" sizes have dumping bottom but no casters.

No. 14. Regular Stock Size Club House Grates

Front	Back	Depth	Price	Ship. Weight
21"	16"	12"	\$ 9.00	44 lbs.
24"	19"	12"	10.50	53 lbs.

33"	27"	16"	20.30	102 lbs.
36"	30"	16"	24.60	110 lbs.

This diagram shows how to measure fireplace when ordering Club House or Wood burning grates.

SPECIALLY MADE CLUB HOUSE GRATES TO FIT YOUR FIREPLACE

Nos. 14 Special and 14B Special—This grate is extra heavy for large fireplace openings. It is made to cover the entire back hearth surface and is used for burning coal or wood. It has a dumping bottom and casters on rear legs but no ash screen, that andirons may be used. Ash screen as shown with regular club house grate can be furnished extra. Grate may be had any width and any depth. In measuring for this grate the sizes should be taken from the width at the back, the width at the front and the depth from the face of the fireplace to the back. (See diagram.) It is best to allow for an air space of ½" to ¾" on all sides. If the exact sizes of the brick work are sent to us we shall allow for an air space, but unless sizes received are specified as exact brick sizes, we shall make the grate up to the sizes given.

Average time required for making special grates, ten days.

SPARK GUARDS—SCREENS

No. 200—Spark Guard

Highest grade guard of this type; made of No. 23, 10x10 mesh wire bound over 5/16 inch round rod frame; all guards over 37 inches wide have an extra cross rod; finished in black, brass handles... These guards are made 7 inches deep.

No. 10—Flat Spark Guard

Frames are made of 1"x3/8" flat iron, hand hammered and welded. The wire cloth is No. 23, 10 mesh with metal bound edges and welded to frame. Shield is of brass or may be had in same finish as frame, the popular Flemish gray; wire mesh is black.

FIREPLACE FENDERS—FRAMES

No. 6—Raised Hearth Fender

This Fender is used principally in connection with a raised hearth of brick. It provides ample room for Andirons and Screen.

No. 6 Fender is made of wrought iron with ends arranged for attaching to brick work after hearth is built. Prevents brick being knocked loose, keeps ashes from scattering on the floor, and makes an ornamental finish for the hearth.

Overall length is 7 inches longer than brick size of fender. Depth or return is 8½ inches.

Stock Sizes	37"	41"	45"	49"	54"	58"
Black	\$ 9.70	\$10.00	\$10.60	\$11.30	\$11.90	\$12.50

Special sizes made to order

No. 400

Fireplace Showing the Use of No. 6 Fender

ANDIRONS SHANK EXTENSION

18" Long. Adjustable

Many good andirons have shanks that are too short to reach back into the fireplace far enough to carry wood. A pair of these extensions easily bolted on to the present shanks, will make such andirons useful. They also can frequently replace burned out shanks by being bolted to the front piece of the andiron. Fits any andiron shank up to 1 inch square. Height adjustable. Price, per pair \$8.00

ELECTRIC LOG STAND

**FURNISH YOUR OWN
NATURAL WOOD LOGS**
—Set them on one of these stands and you have the appearance of burning logs in your fireplace. Stand fully equipped with two red electric lights ready to plug into any socket—aluminum revolving fans on each lamp give a flicker like genuine fire.

Price, stand and lights complete, 18" wide \$12.00

FIREPLACE FRAMES

When ordering frames always give **EXTREME OUTSIDE** measurements: width first, height second, size angle wanted, third.

There is such a variation in the size of fireplace openings we keep only one standard size frame made up in stock, namely: 31" wide, 30½" high, 1¼x1¼" angle. These sizes are extreme outside measurements of frame.

In placing your order always give width first, height second of **EXTREME OVERALL** size of frame. Specify size of angle wanted; also finish: Plain Black, Hammered Flemish, Plain Brass, Polished or Brush finish.

No. 1 is a Knock Down frame, made any size in either 1¼" or 1½" face. Inside return may be any size desired. Material used is No. 20 gauge sheet iron or brass, plain or hammered. This has slightly rounded edges and has the appearance of a heavy frame. The neat adjustable diamond corner lock is of brass and is polished when used on a black frame, unless ordered in brush brass or blackened.

No. 4 is made of same stock as No. 1 in 1¼x1¼" angle only: Plain Black, Hammered Flemish, Plain or Hammered Brass.

No. 5 is made of 1¼x1¼x½" or 1½x1½x½" angle in Black; also in Old Brass or Japanese Bronze Plated finish.

No. 6. 1¼x1¼" angle, No. 18 gauge, plain brass only; Polished or Brush Brass finish.

Made in one stock size only. When ordering special sizes always give **EXTREME OUTSIDE** measurements, width first, height second, size angle third. Stock size quoted is 31" wide x 30½" high.

No.	Smooth Black	Hammered Flemish	Smooth Brass	Hammered Brass

FIREPLACE FRAMES

COLONIAL ELECTRIC "FIRELIGHT OUTFITS"

An Electric Fireplace Unit with the appearance of Real Burning Coals. Sets into Brick, Tile or Wood Mantel Opening. Firebrick Lining or Tile Hearth not absolutely necessary with these outfits.

Firelight Outfit No. 2106

SIMPLICITY—Can be installed in ten minutes by connecting the plug and setting outfit in place.

BEAUTY—Instantaneous appearance of a glowing coal fire at the snap of switch on grate.

ECONOMY—Flue, Firebrick Lining and Hearth are not required.

No. 2106—Frame and Hood made in Hammered Flemish finish. Lining and Raised Hearth finished lusterless, black. A very beautiful and substantial setting for electric grate. Raised Hearth $2\frac{1}{2}$ inches above floor level, extending out 4 inches from facing. Can be furnished in sprayed Bronze or Verde Green finishes at no extra.

Grate design No. 143, fitted with two colored lamps, and flicker fans, switch on grate to control lights; sufficient colored glass to cover entire surface of grate; cord and plug ready to attach to outlet.

Made in the following sizes:

	Price complete
25" wide x $30\frac{1}{2}$ " high, 12" deep.....	\$40.00
31" wide x $30\frac{1}{2}$ " high, 12" deep.....	44.00
37" wide x $30\frac{1}{2}$ " high, 12" deep.....	49.00

Firelight Outfit No. 2108

For use on flat walls and where no provision has been made for fireplace opening. This grate requires only 4 inches in depth, complete with glass coals, electric lights and aluminum fans; ready to plug into electric socket.

Outside size of frame:

25 x $30\frac{1}{2}$ —4" deep	\$28.00
31 x $30\frac{1}{2}$ —4" deep	32.00
25 x $30\frac{1}{2}$ —8" deep	37.00
31 x $30\frac{1}{2}$ —8" deep	40.00

We make a number of different style Cranes in Wrought Iron. We find, however, that our No. 1 with bracket on straight lines and No. 2 curved Cranes meet nearly all requirements, as they are made to be used for any square fireplace opening from 24" to 48" wide. While they are made of Cast Iron they are very strong, no fear of breaking, and they are inexpensive. Lugs for building into brick work are provided and the Crane is so made that it may be removed at any time. The sliding hook permits Kettle to hang in center of opening.

Price, either style with lugs.....\$7.00
Write for prices on kettle.

THE GLO-HOT ELECTRIC FIREPLACE GRATE AND HEATER

Approved by Underwriters' Laboratories

No. 251

No. 2510

NO FLUE NECESSARY—ODORLESS AND CLEAN

In many homes, new and old, no fireplace flues have been installed or planned for. The new GLO-HOT Electric Heater meets this situation and at last you can have the appearance of a genuine fireplace.

The GLO-HOT, which sets in any fireplace opening, connects with the house wiring system or with the meter by direct wire, and gives the effect of a real fire and heats at the same time.

The lower part of the GLO-HOT consists of a compartment containing two 50-watt electric lamps, concealed under a heavy mesh screen. This screen supports the colored glass coals. The electric lamps beneath them when illuminated give the appearance of a hard coal fire. On the top of each lamp a small aluminum fan is mounted on a pin pivot. When the bulbs are lighted the heat makes the fans revolve. This gives a natural flicker as of actual fire through the glass coals.

The upper part of the GLO-HOT consists of an attractive fireplace hood under which is mounted the glo-bar heating element. This is the latest, the most economical and scientific device for converting electric energy into heat. The glo-bar is surrounded by a concealed wire mesh screen which protects it and prevents any possible contact with inflammable material. The heating element is mounted between spring support terminals which hold it in place.

A copper reflector is mounted behind the glo-bar heating unit. The copper reflector is scientifically shaped to reflect all the heat rays directly into the room.

The operation of the GLO-HOT is controlled by a single three-point switch mounted conveniently on the outside. At the first snap of the switch the grate is flooded with the life-like flicker of glowing coals. At the second snap of the switch, as if by magic, the heat flows out from the concealed heating unit, and at the third snap of the switch both the lights and the heat shut off. This allows the GLO-HOT to operate with only the lamps burning or with the lamps and heating element both in operation.

The GLO-HOT beautifies your fireplace and gives you a practical, auxiliary heating unit. It will take the chill off a room and keep it comfortable. It is ideally adapted to the chilly days of Spring and Autumn. It adds a glowing warmth to the hearth in Winter.

The GLO-HOT keeps the air in constant circulation because between the rear wall and the reflector there is an air space which is open at the bottom and at the top. As the air in this is heated it rises and enters the room through the openings just over the hood, and fresh air is taken in at the bottom. Thus ventilation and circulation is constant.

In construction the GLO-HOT is substantially and artistically built of gray iron castings, making a rigid, durable grate. A steel plate screwed on the back gives access to wires and plug. Two light sockets for lamp illumination of coals are mounted on the formed steel bottom or firepot.

No Flue, Vent or Hearth Necessary with this BEAUTIFUL ELECTRIC FIREPLACE

HEALTHFUL HEAT

No Odor or Devitalized Air

Looks like LIVE COALS and REALLY HEATS

Complete Unit, No. 1271, as shown ready to set against your wall as easy as a piece of furniture.

Mantel furnished in White, Mahogany or Walnut Finish or in Quarter-sawed Oak. Shelf 5'0" wide, 14" deep.

Facing, Composition stippled Textone fastened to mantel.

Metal Frame around opening, Flemish Grey Finish. Fastened to Black Metal Lining. Sets into opening.

GLO-HOT ELECTRIC GRATE No. 271, Popular Flemish Grey Finish. Brass trim. Ready to connect to outlet.

PRICE, COMPLETE OUTFIT

Mantel Primed White Finish	\$170.00
Mantel, Mahogany or Walnut Finish.....	180.00
Mantel, Quarter-sawed Oak.....	186.00

No. 1271—Complete Outfit.

THE GLO-HOT ELECTRIC FIREPLACE GRATE AND HEATER

Approved by Underwriters' Laboratories

No. 253

No. 2530

The GLO-HOT ELECTRIC GRATE

Patent Applied For

Looks Like Live Coals and Really Heats

At the first snap of the switch, the grate is flooded with the life-like flicker of glowing coals. At the second snap of the switch, as if by magic, the heat flows out from the "Globar" heat unit concealed under the hood of this beautiful Grate.

NO FLUES NECESSARY

While the genuine fireplace with its flue and enchanting play of flame holds full sway, there are, nevertheless, many homes new and old, where no flues are allowed for in the plans. The Glo-Hot Electric Grate meets this need. It gives the fascinating flicker as of real fire in glowing coals and HEATS as well, without requiring any flue. It comes closer to the real fireplace than ever before attained.

THE COST OF OPERATION IS LOW compared with any type of auxiliary heating where a flue is used for the escape of smoke or gases and consequent waste of heat that goes up the chimney.

Push sliding handle out of sight. Device easily installed after Damper is set.

Quickly attached to any Colonial Damper purchased since 1923.

Handle just below opening, indicating lever swings smoothly. Right to open, Left to close. Regulates door to fraction of an inch without jerking.

THE COLONIAL HEAD, THROAT AND DAMPER FOR FIREPLACES

Saves Fuel—Gives More Heat—Prevents Smoky Fireplaces. This Is the Only Damper Made Which Provides for Expansion and Contraction Within Itself. Patented

This damper embodies thirty years' practical experience gained in erecting fireplaces throughout the United States. Experience with our first dampers showed that a one-piece iron damper frequently cracked the facing of the fireplace because of expansion. Therefore we made the Colonial Damper IN SECTIONS—of best gray iron castings—no sheet iron. The sections are securely bolted together, expansion joints allowing for the expansion of the hottest fires and the subsequent contraction. This feature prevents cracked fireplace facings and is covered by United States patent.

Built in sections of the best gray iron castings securely bolted together and reinforced with a steel angle bar. It is rigid, extra heavy, and able to sustain great weight, yet designed and constructed so as to allow for the movement of expansion without disturbing the outer work.

The steel reinforcing angle bar sets half way up the sloping front of the damper. The ledge which it forms furnishes a footing on which to build the common brick backing and on which to anchor the facing.

A mason experienced in fireplace building will spend much more time in forming the Throat than the cost of the Colonial Head.

With it an experienced workman can't build wrong at the vital point. The Colonial Head sets above the bottom of the span over opening. This saves time because the fire brick need not come to exact levels.

WHY COLONIAL HEAD? BECAUSE—

COLONIAL DAMPER is the only damper made providing for expansion and contraction within itself.

COLONIAL DAMPER can be set at any point in the fireplace—high, low, forward or back, to meet all conditions of construction.

COLONIAL DAMPER is adapted for all kinds of fireplaces—stone, marble, tile and wood.

COLONIAL DAMPER is so designed that it fits any fireplace opening—half circle arches, segment arches, or square openings.

COLONIAL DAMPER insures proper construction at the most vital part of the fireplace—the throat.

COLONIAL DAMPER may be had in three styles of operation—A, E and G.

COLONIAL DAMPER is made so that styles A, E and G are interchangeable with necessary parts.

COLONIAL DAMPER is acknowledged by leading architects, experienced builders and informed home owners as the best damper made. Easiest to set if fireplace is built right, hardest if built wrong.

COLONIAL DAMPER is the least expensive fireplace Dome Damper made—all points considered.

The table below shows proper size flue and damper for a given size fireplace opening, height not over 30 inches. Always use a COLONIAL DAMPER large enough to cover full width of opening.

Jackson Dustless Ash Trap

Those who have had experience with fireplaces know how unpleasant it is to have ashes blow back into the room when they are being dumped into the ash pit. The reason for this is that the ashes replace the air in the pit forcing the dust back through the ash trap door. Our Dustless Ash Trap overcomes this nuisance. It is so arranged that when dumping the ashes the top is closed, preventing dust from blowing into room.

Outside Size of Frame	Size of Door	Price
7" x 9"	6½" x 5"	\$2.80
9" x 14"	11" x 5¼"	4.20

Door fastened to frame. Best common Ash Trap.
Price \$1.24.

No. 23

Common flat single door trap. Size, 7x9.
Door fastened to frame. Price \$0.80.

Colonial Combination Flue Thimble and Clean-Out Door

For Boiler, Furnace or Stove Flues.

It frequently happens that a furnace or boiler flue cannot be formed at the bottom of the chimney and must be started at a higher point, making it impossible to form a pocket for soot. In such cases a Combination Flue Thimble and Clean-Out Door is a necessity. It not only makes a good, safe connection for the Furnace or Boiler Smoke Pipe, but also makes the flue accessible through the Clean-out Door which may also be used for a check on the draft when desired. They are made of cast iron painted black. Opening may be left in the brick work (sizes given below) and the Thimble and Clean-out Door may be inserted any time, provision being made for anchoring. They are made for 6", 7", 8", 9", 10", 11", and 12" pipe.

Pipe Size	Brick Opening	Shipping Weight	Price
6", 7" and 8"	9" wide, 15" high	25 lbs.	\$5.50
9", 10", 11" and 12"	13" wide, 20" high	32 lbs.	8.00
